

Final Conference

# PRODUCT ENVIRONMENTAL FOOTPRINT

## The opportunity to boost circular economy in the agri-food sector

27 MAGGIO 2019 - "PALAZZO WEGIL" - AUDITORIUM - ROMA, Largo Ascianghi 5

The "Product Environmental Footprint" (PEF) is a new European reference, currently being tested, to assess the environmental impact of a production cycle and to consider the impacts of a product along its life cycle, from the production of raw materials, processing, packaging, distribution to waste management. The conference will provide the final balance of the European project PEFMED (<https://pefmed.interreg-med.eu/>) communicating the main results gathered by the pilot actions conducted on a basket of products in different European regions of the Mediterranean area. The event will also be an opportunity to present other good practices in the field of environmental sustainability and understand how the regional Smart Specialization Strategies can foster interventions and incentive measures to support the sustainability of the Mediterranean food supply chains. During the conference, posters relating to best practices, technologies and application cases selected through a specific call for poster will be presented and awarded.

### PROGRAMME

9:30 • **Registration And Welcome Coffee**

*Moderator: Mr. Carlo Hausmann, Director Agrifood Chamber of Commerce Rome*

10:00 **YELLOW SESSION: PEFMED RESULTS IN A NUTSHELL**

*Release of #1 official video project presentation)*
